Feature enhancements

No feature enhancements for this release.

Defects resolved

- **Progress Notes**: Progress note signatures now keep the correct signed-by user, even when the note is created or edited by one user and signed by another.
- **Billing**: Transworld Batch Selection now loads accounts correctly instead of showing a Denticon Page Unavailable error when invalid last-payment dates are present.
- **Document Portal / Treatment Plans**: Treatment plans returned from Document Portal now include only the procedures that were originally selected for signing.
- **Payment Plans / Ledger**: Cancel contract adjustments now calculate the correct amount and post to the original provider when a regular payment plan is deleted after the preferred provider has changed.
- **Setup**: For multi-practice group users, assigning an office that already existed under a different practice group now saves correctly. Previously, the save would appear to succeed without actually applying the change.
- **Treatment Plan / Ledger**: Treatment Plan posting now completes without showing an erroneous error message, even when the posting itself succeeded.
